Tools for Installation

	Item	Specification (for example)
1	Nail gun, Compressor	 
2	T ruler, measuring tape	 
3	Eye protection, Gloves, hard hat	  
4	Grinder, v-cutter	 
5	Metal shears, flat head vice grip	 

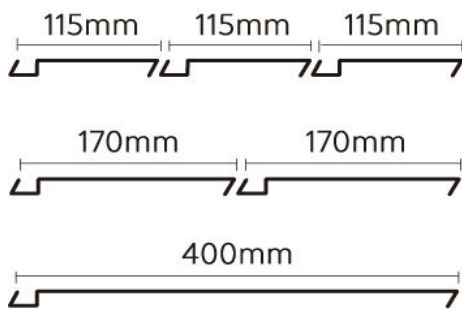

FEROOF Wall Cladding Panels Specifications

MATTONE

Total Length: 1,340mm / 2,000mm
Exposed Width: 155mm / 384mm
Bent Height: 15mm
Coverage: 4.40/3.00
Product Thickness: 2mm

Exposed with specification
(3 different types)

Main material (Mattone/ Siding)

- Should be from Ferroof
- Should be stone chip coated Galvanized steel.
- Size is customizable

Color chart

*The actual color may vary slightly.

Color Chart – Single colors

Side Clip

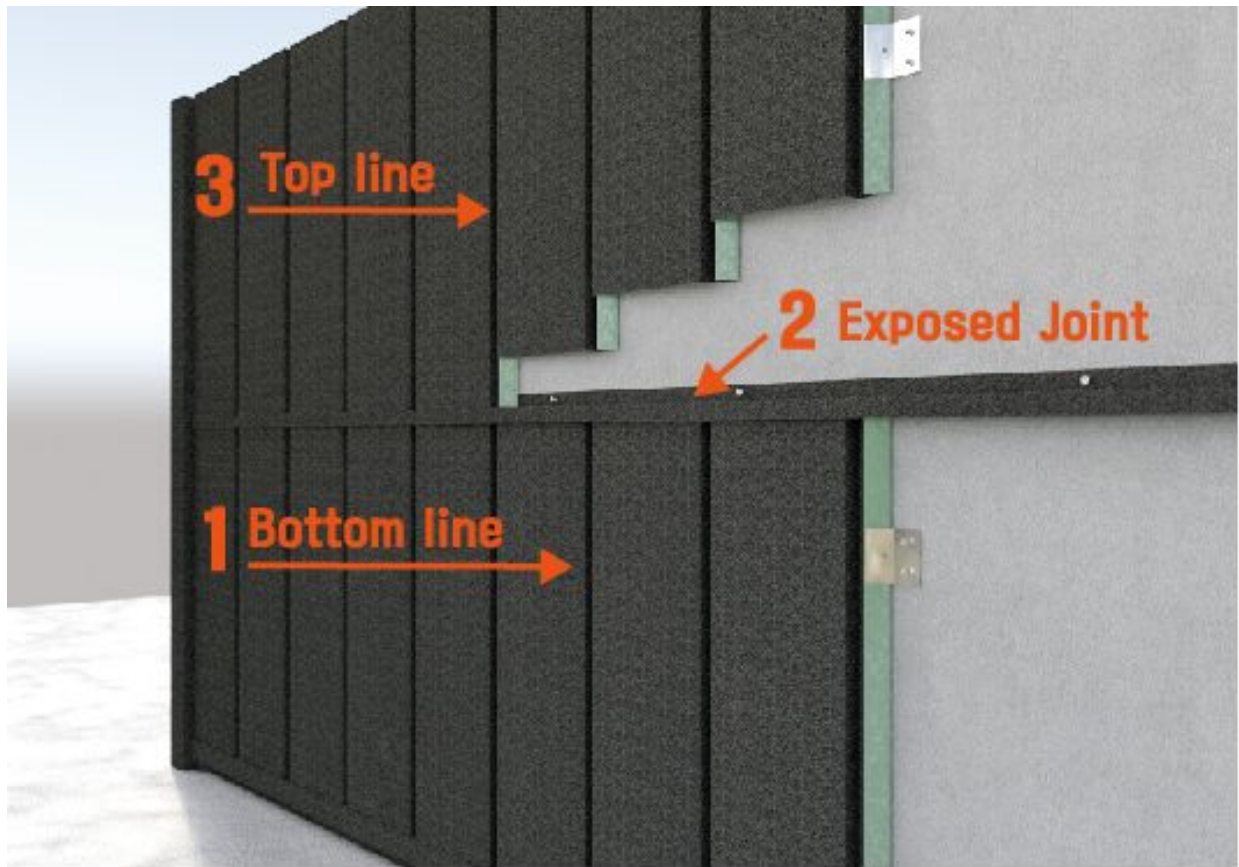

- There are two standard lengths: 1,340 / 2,000mm
- Accessories for the installation should be purchased from Feroof or at least should be rust preventative materials.
- SUB structure or fastener brackets should be treated with rust preventatives.

Mattone Installation Guide–[Vertical Overlapping method]

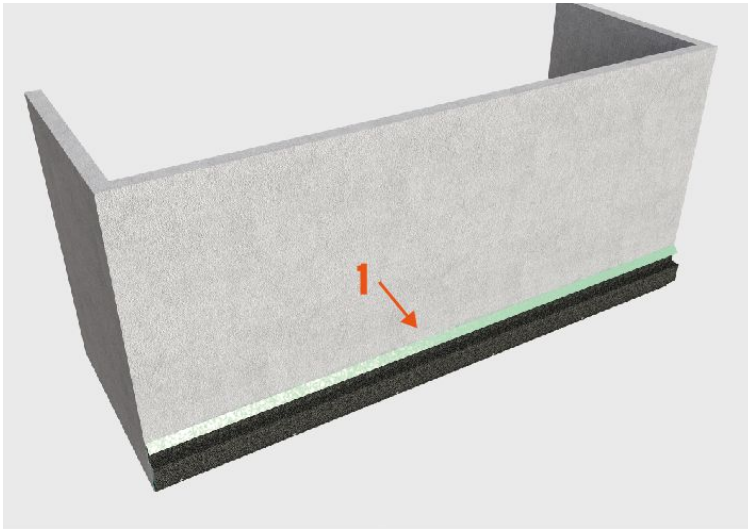

- 1– Install long Mattone panel from the left side.
- 2– Install short Mattone panel using #3
- 3– Continue the installation process to the right.

Mattone Installation Guide—[Vertical walling method]

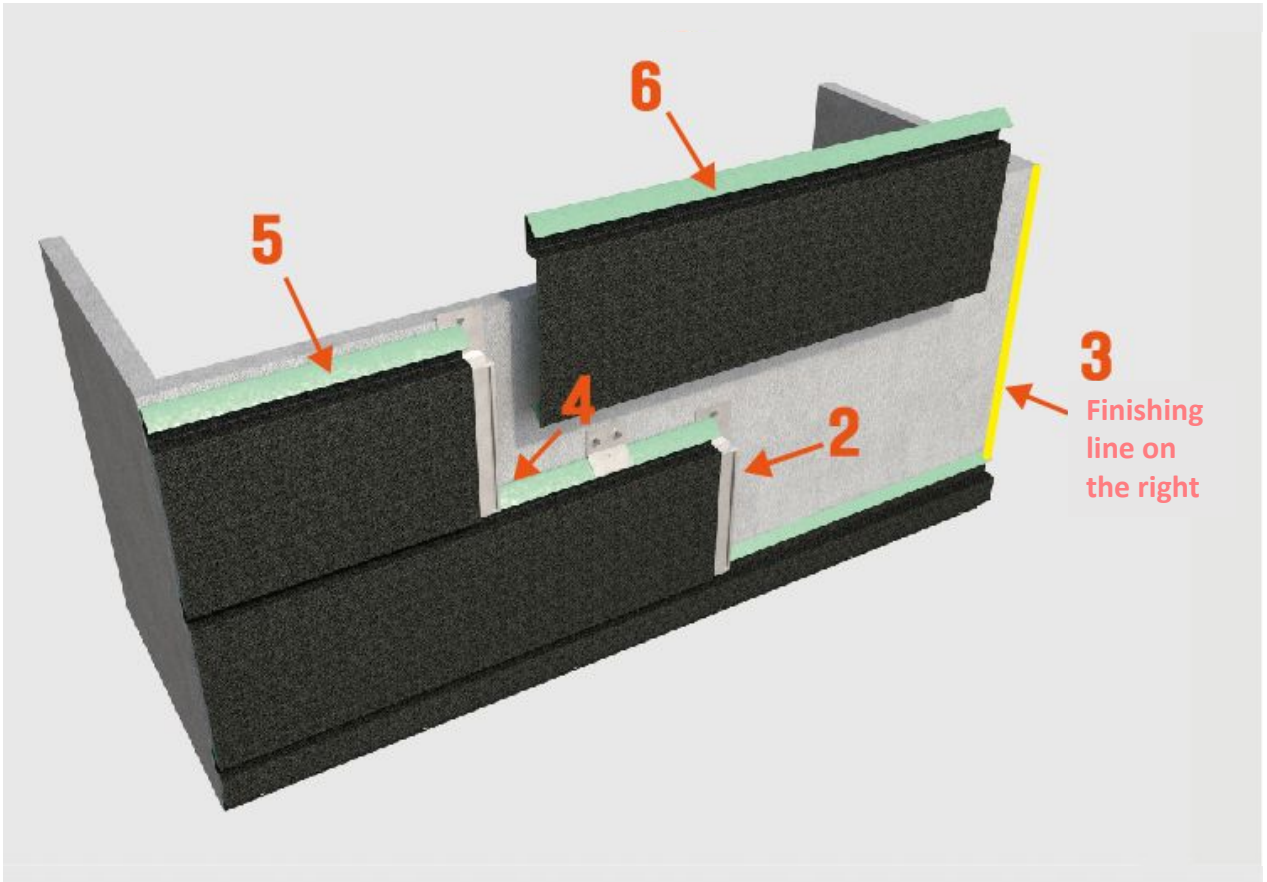

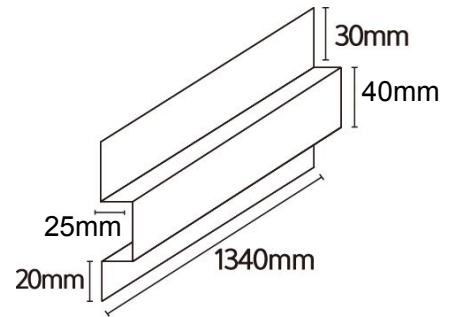

- 1– Install Mattone from left to right on the bottom.
- 2– Use Exposed Joint over the first layer.
- 3– Continue the installation from left to right on the top.

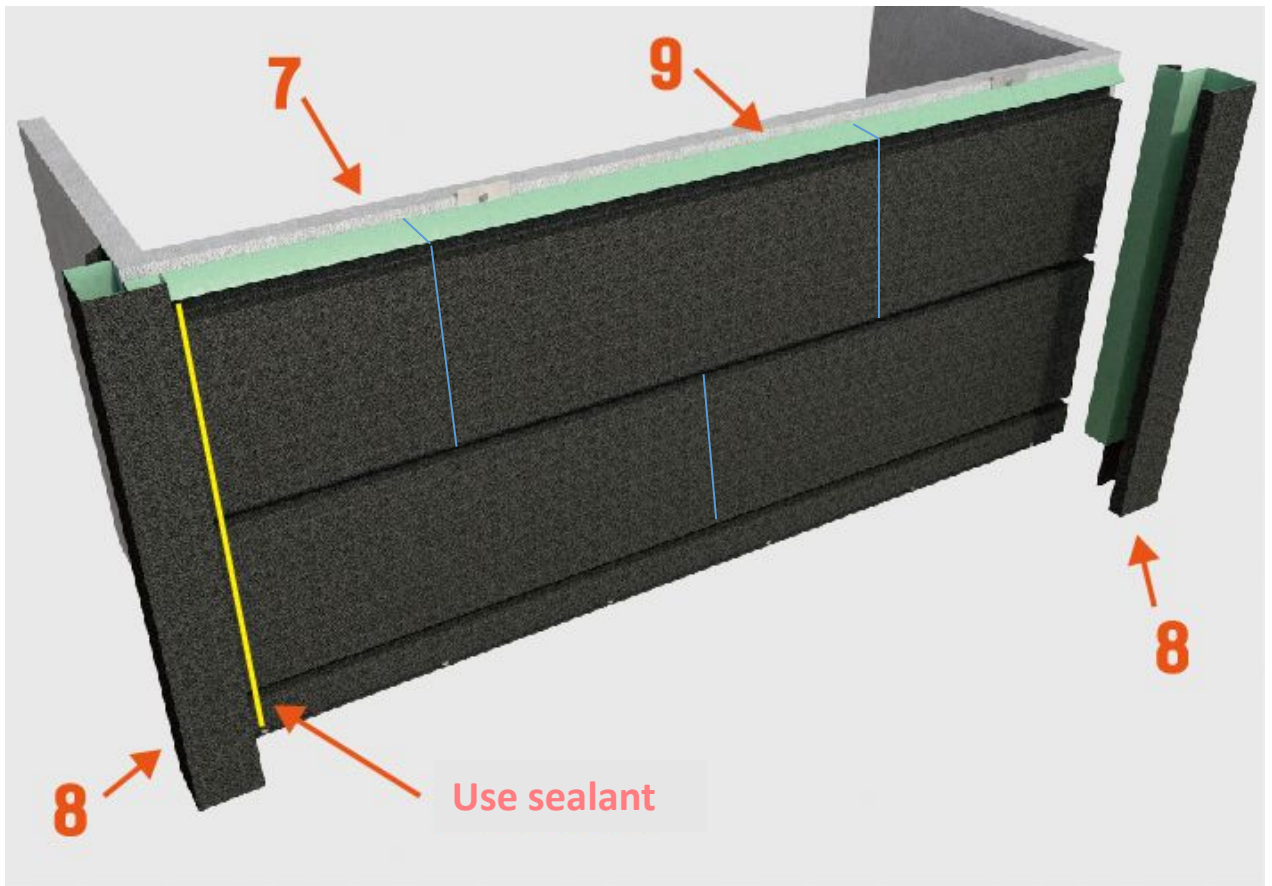

Mattone Installation Guide-[Horizontal method]

1- Install the starter for horizontal Method

2. Install the first layer of Mattone panel and hidden joint in-between panels.
3. Installation should be done all the way to the right corner(#3 above) before start working on the next layer.
4. To begin with the second layer, cut a Mattone panel in half and install using hidden joint in between #5 & #6 panels.

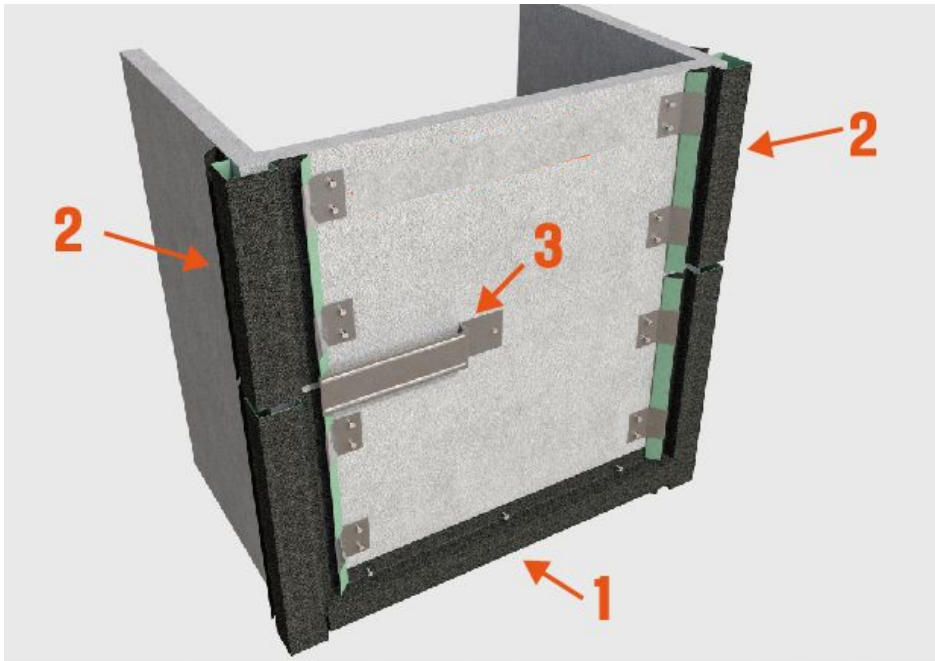

7. When horizontal overlapping installation is finished, attach outer corner.
8. After installation of the corners, use sealant to fill the gap
9. Finish top layer by putting exposed joint.

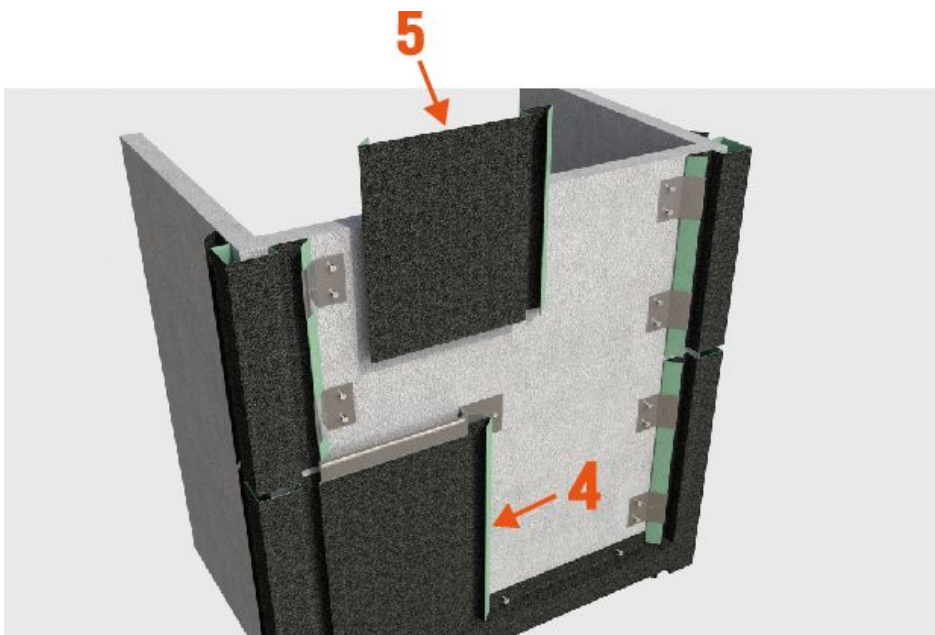

Exposed joint

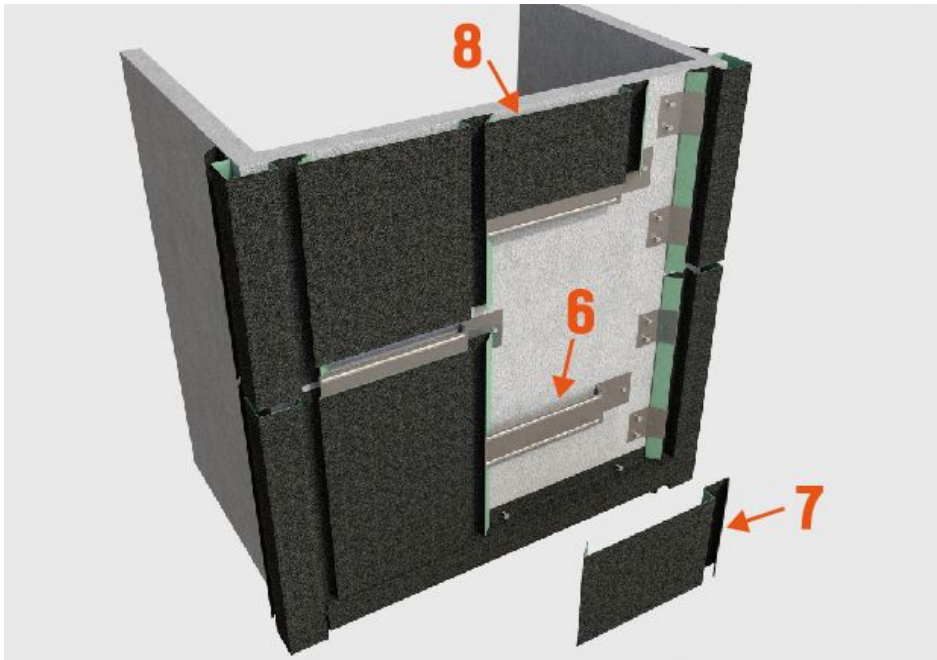

Mattone installation guide for professionals – Outer corner

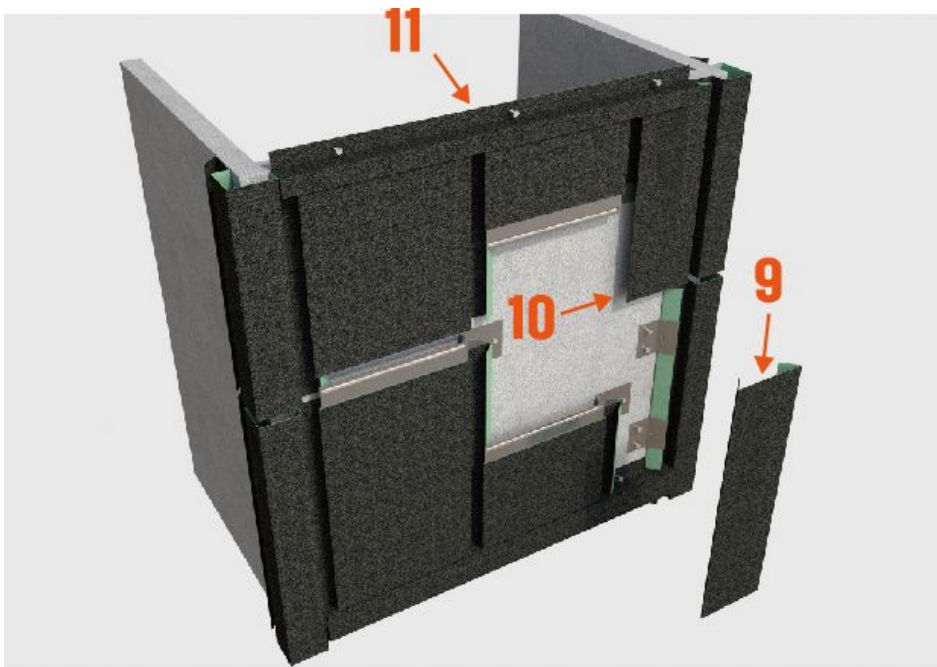

- 1 - Install the starting panel on the bottom using fastener.
- 2 - Install outer corner for professionals on the both corners using side-clip
- 3 - Measure the height of the mattone panel, then install hidden joint on the proper spot.

- 4 - Fasten the mattone panel.
- 5 - Install another panel against the bottom panel.
To make it waterproof, use sealant.

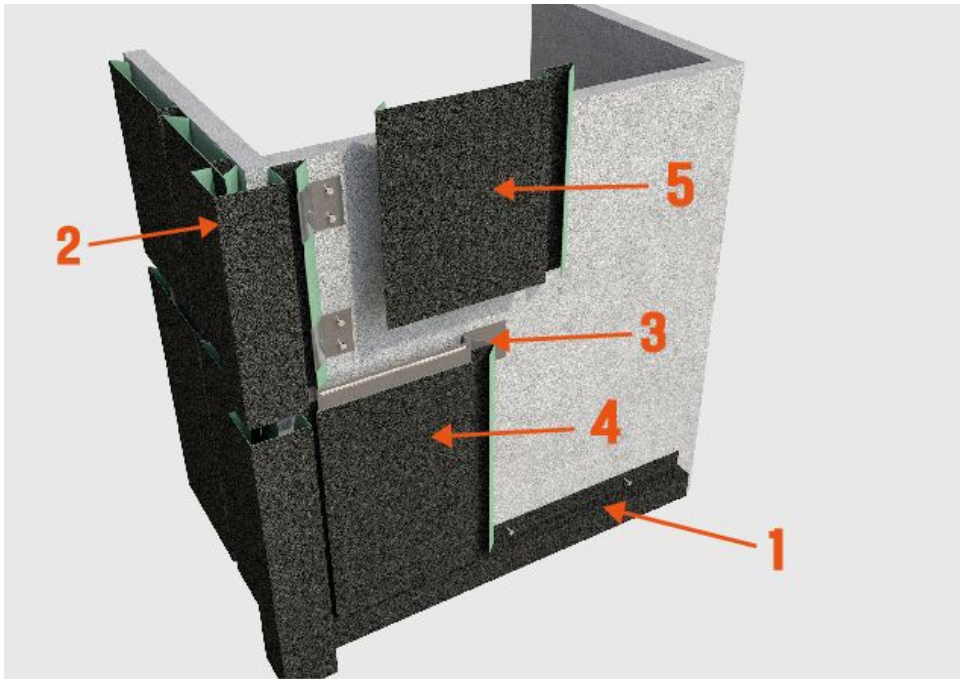

6. Cut matrone panel into smaller pieces so panels could overlap. Hidden joints should be put up on the spot where the top of #7 will meet.
8. Panels should flush on the top of the wall.

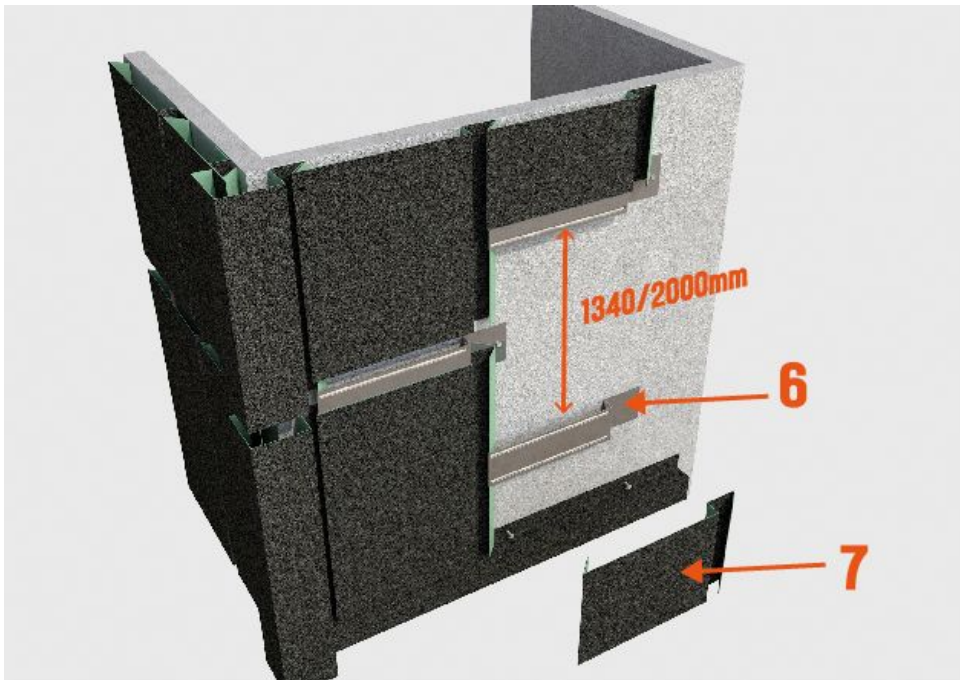

9. When the wall does not fit full width of the panel, cut and bend to fit.
10. Repeat the process 9. up to the top.
11. Install finishing panel.

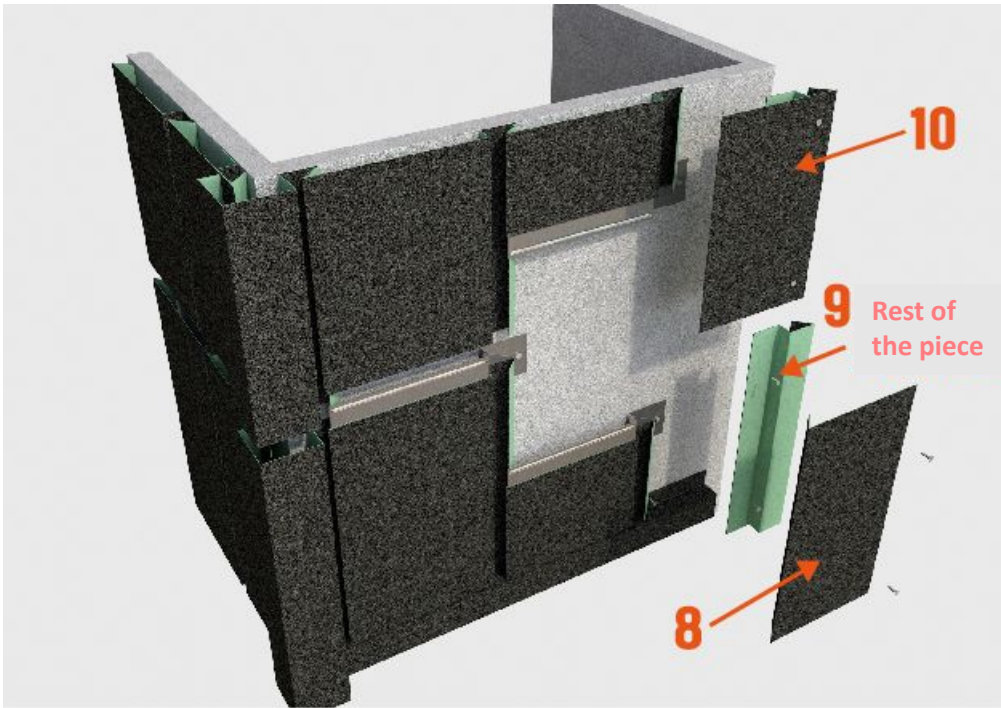

Mattone installation guide_Simplified– Outer corner

- 1 – Install starter panel or J-channel panel on bottom.
- 2 – Install Out-corner 2 (Simplified) panel.
- 3 – Install hidden joint on a proper spot for the mattone panel (#4).
- 4 – Continue installing panels against each other panels.
- 5 – Install all the way to the top before working on the next layer

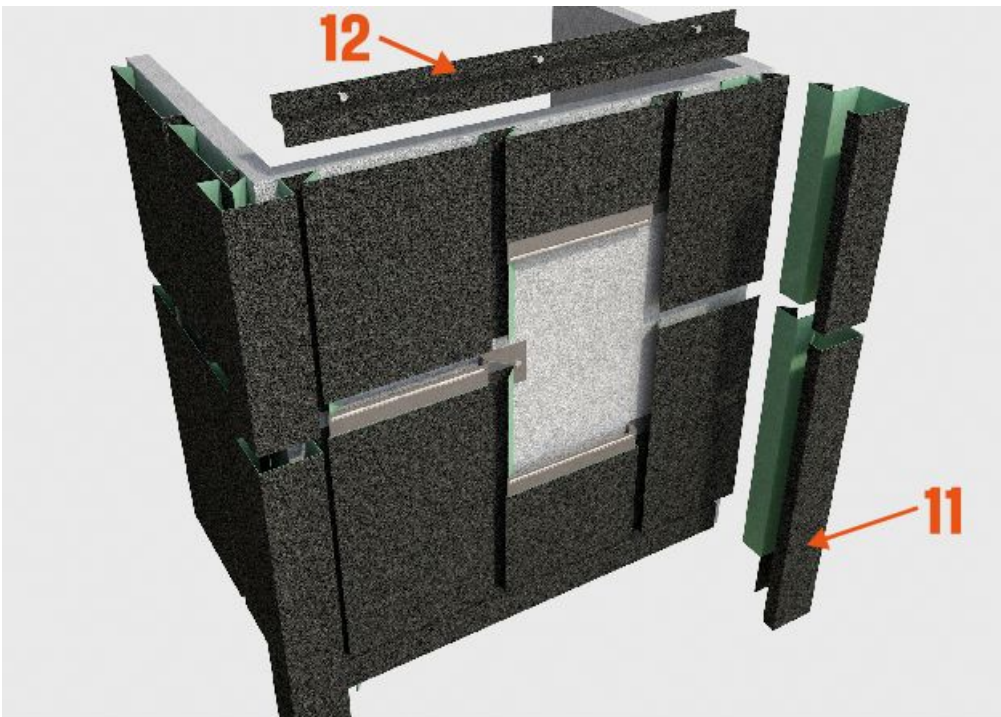

- 6 – Install hidden joint where cut Mattone panel(#7) will be mounted in overlapping pattern.

8 – When the wall does not fit full width of the panel, cut it into proper width and keep the cut part.

9 – Install the cut part from #8 upside down as bottom bracket.

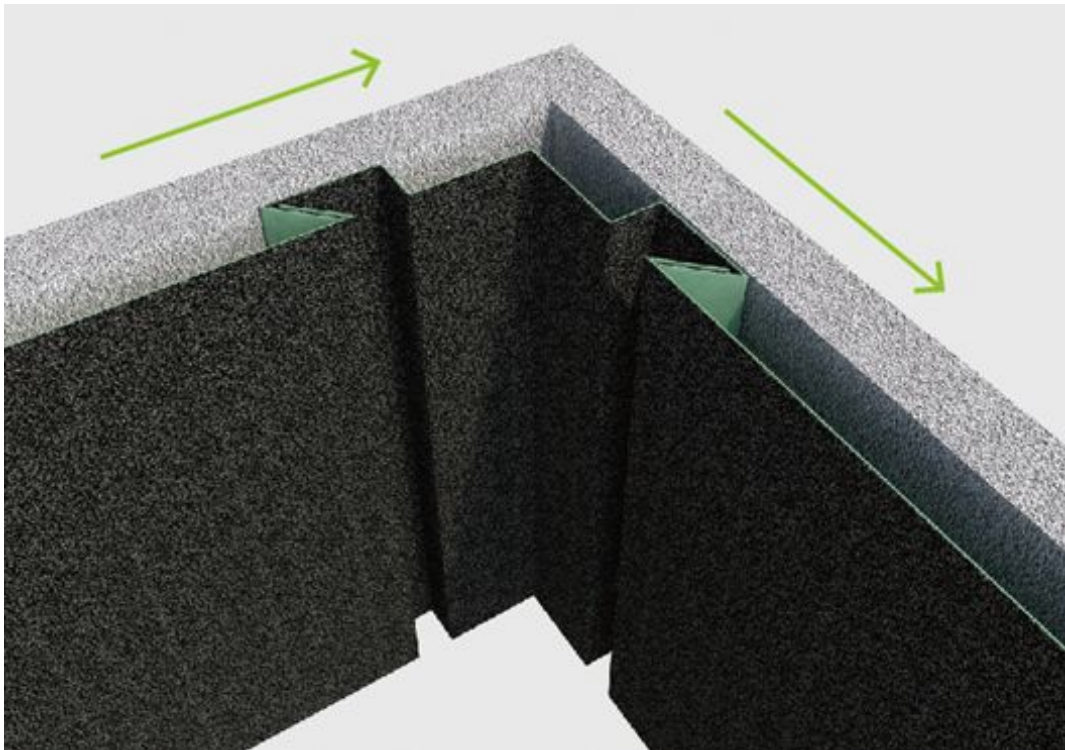

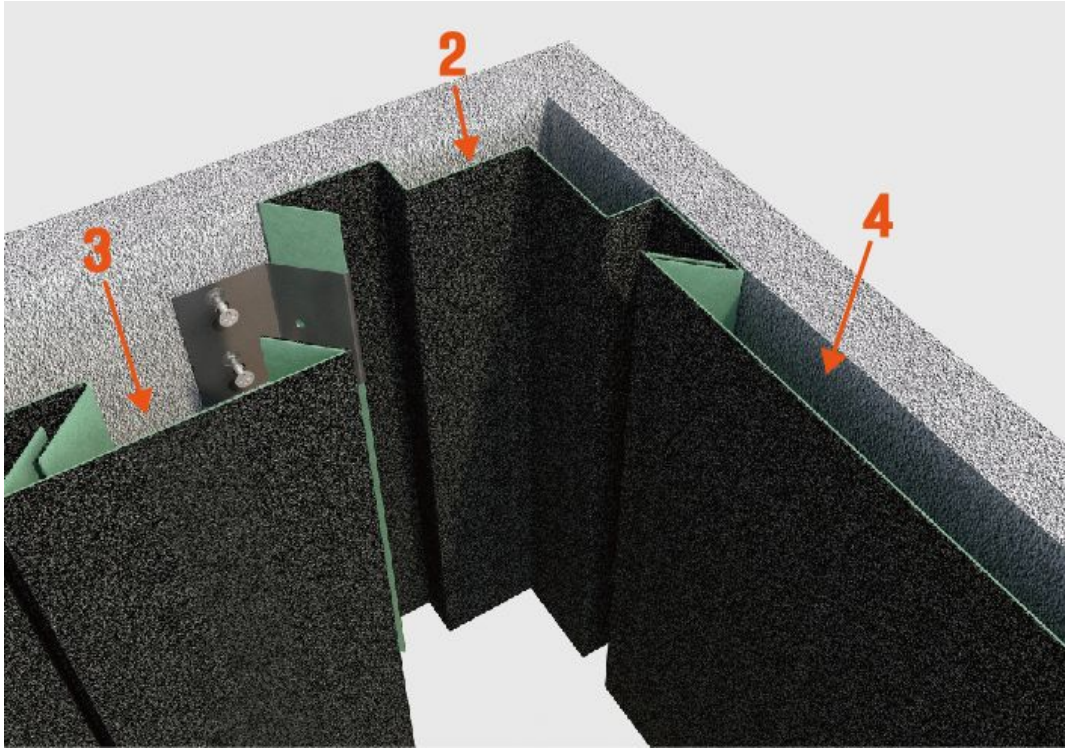

10 – Repeat the process all the way to the top.

11 – Install Out-corner 2 (simplified) with fastener and apply sealant.

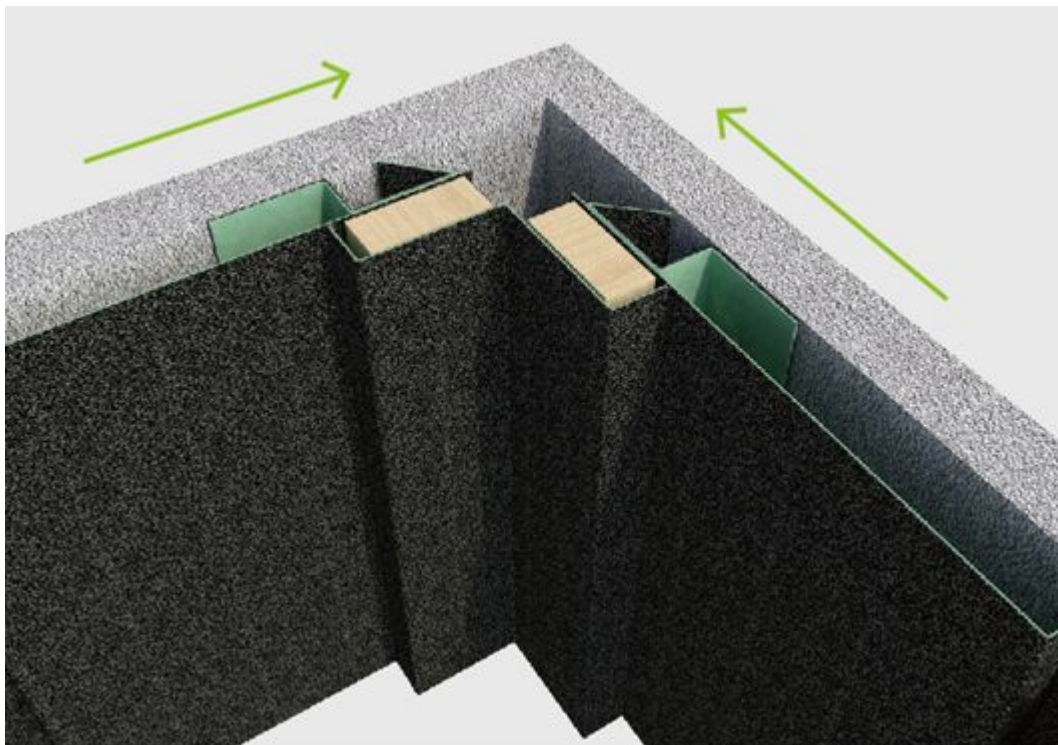

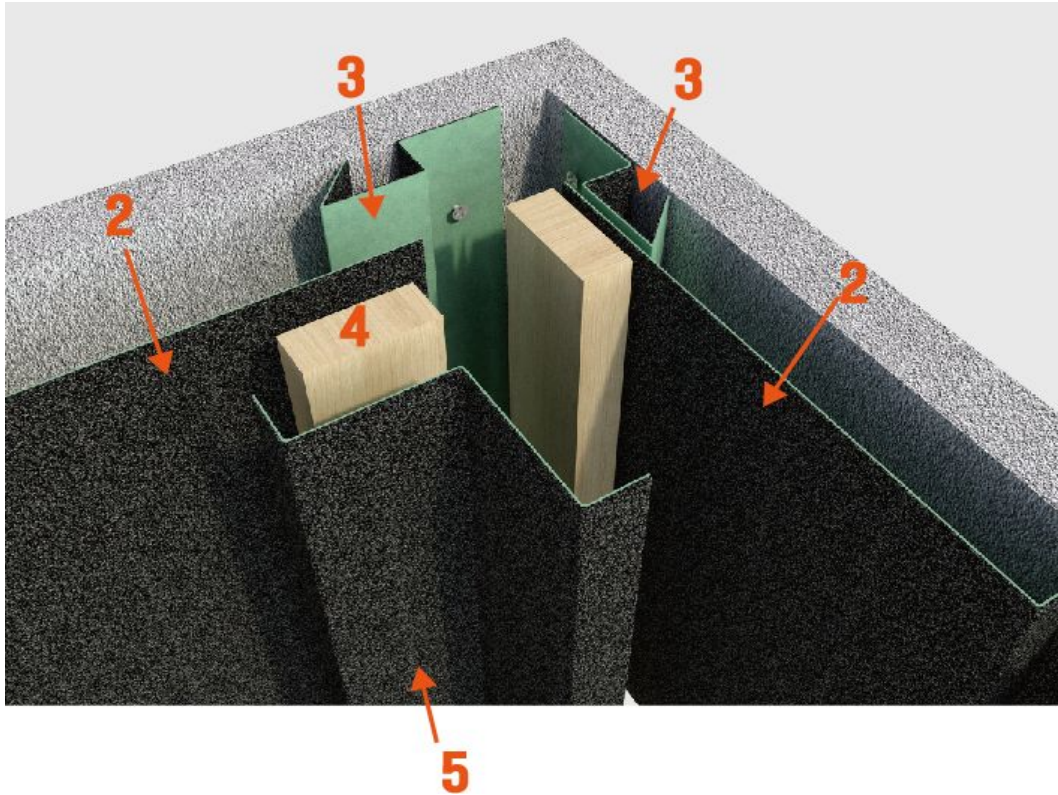

12 – Finish with the top piece.

Mattone Installation for professional – In-corner

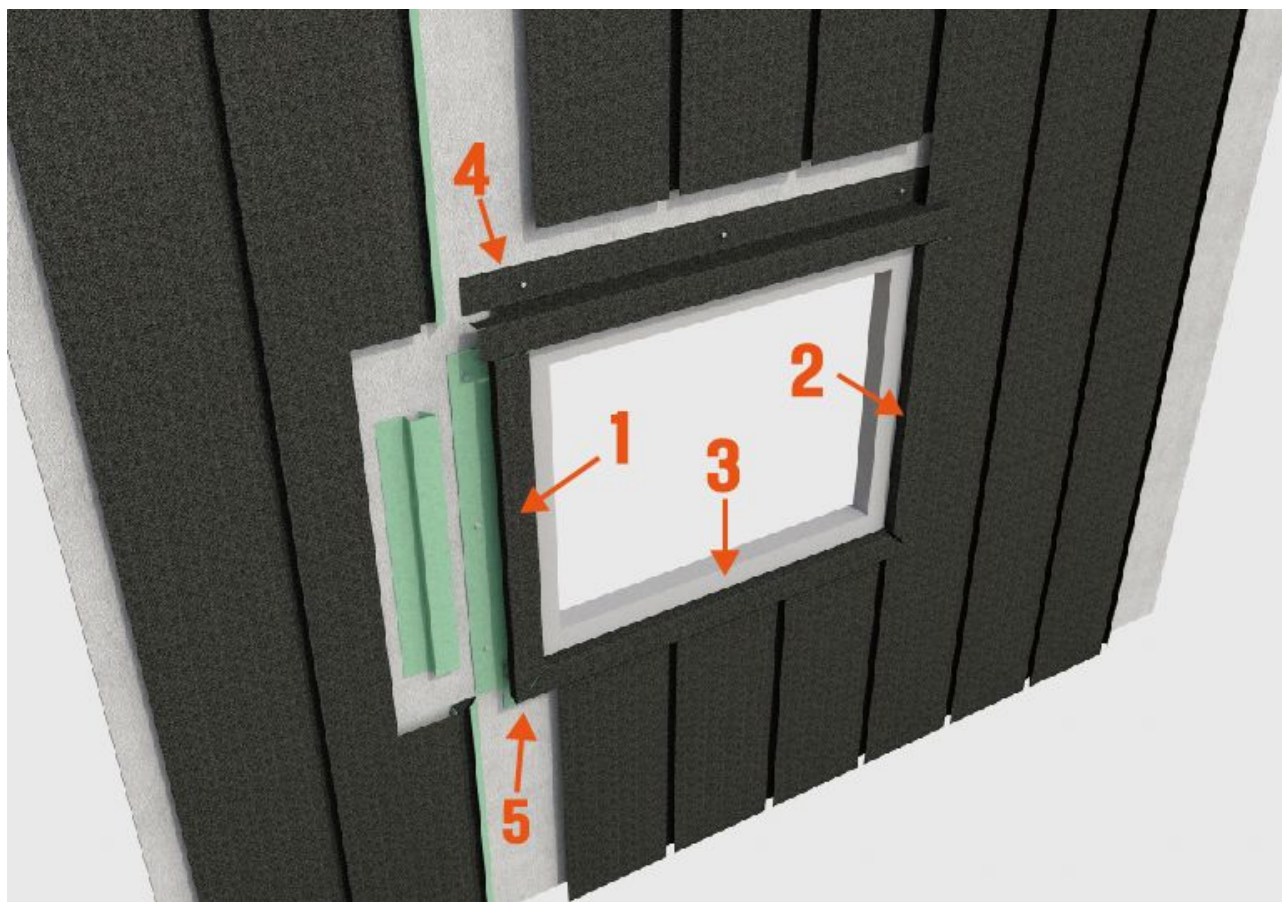

- 1 – Install starter panel on the bottom.
- 2 – Install In-corner panel (professional).
- 3 – Measure the width to cut and bend mattone panel.
- 4 – Install matone panel.

Mattone Installation In-corner simplified

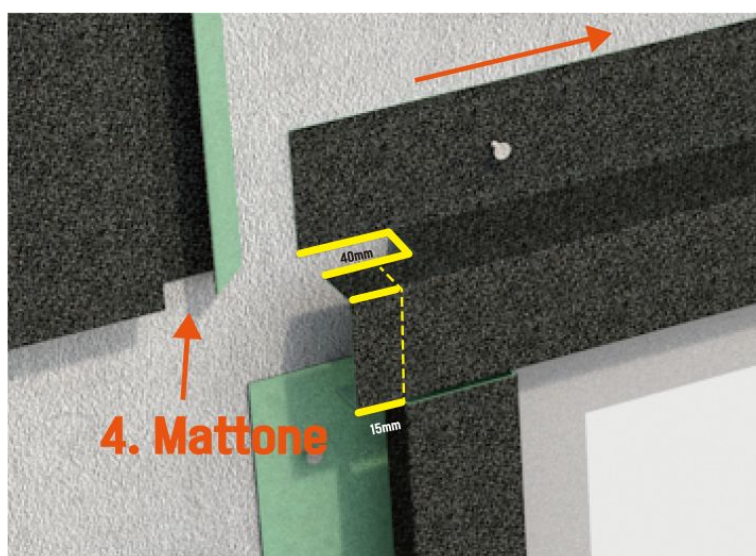

- 1 – Install starter panel on the bottom.
- 2 – Cut the mattone panel with proper width to the corner and keep the cut part.
- 3 – Cut part should be put inside out to be used as bottom braket.
- 4 – Use pre-treated batten with 15mm thickness as moldings.
- 5 – Install simplified in-corner using nail gun.

Mattone Installation for professional – around window frame

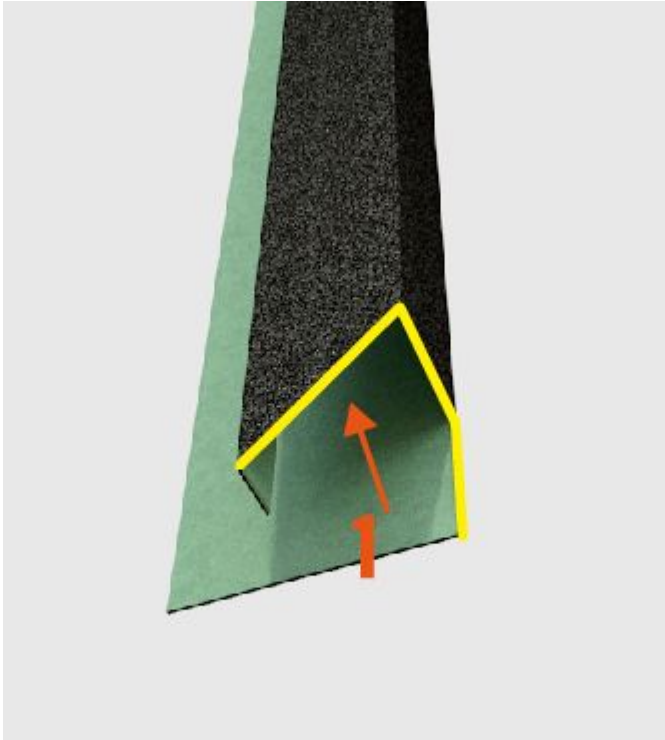

- 1- Cut the panel as shown on #1
- 2- Repeat the process
- 3- Put J channel panels together
- 4- Finish using sealant

[Detail of cutting Chair type panel]

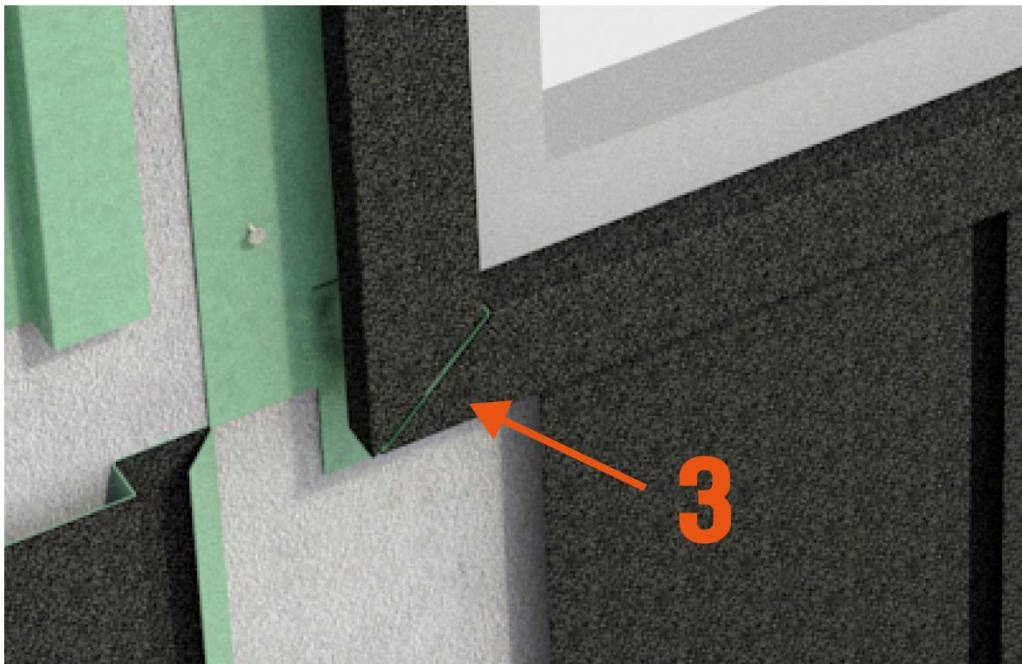

- 1- Cut Chair type panel 15 mm longer than J panel
- 2- Cut the panel as shown as the solid lines in the picture
- 3- Fold the panel following the dotted lines
- 4/5- Install the #4 panel on the left side and put the chair type panel to lock.

[Detail of J channel panel diagonal cut]

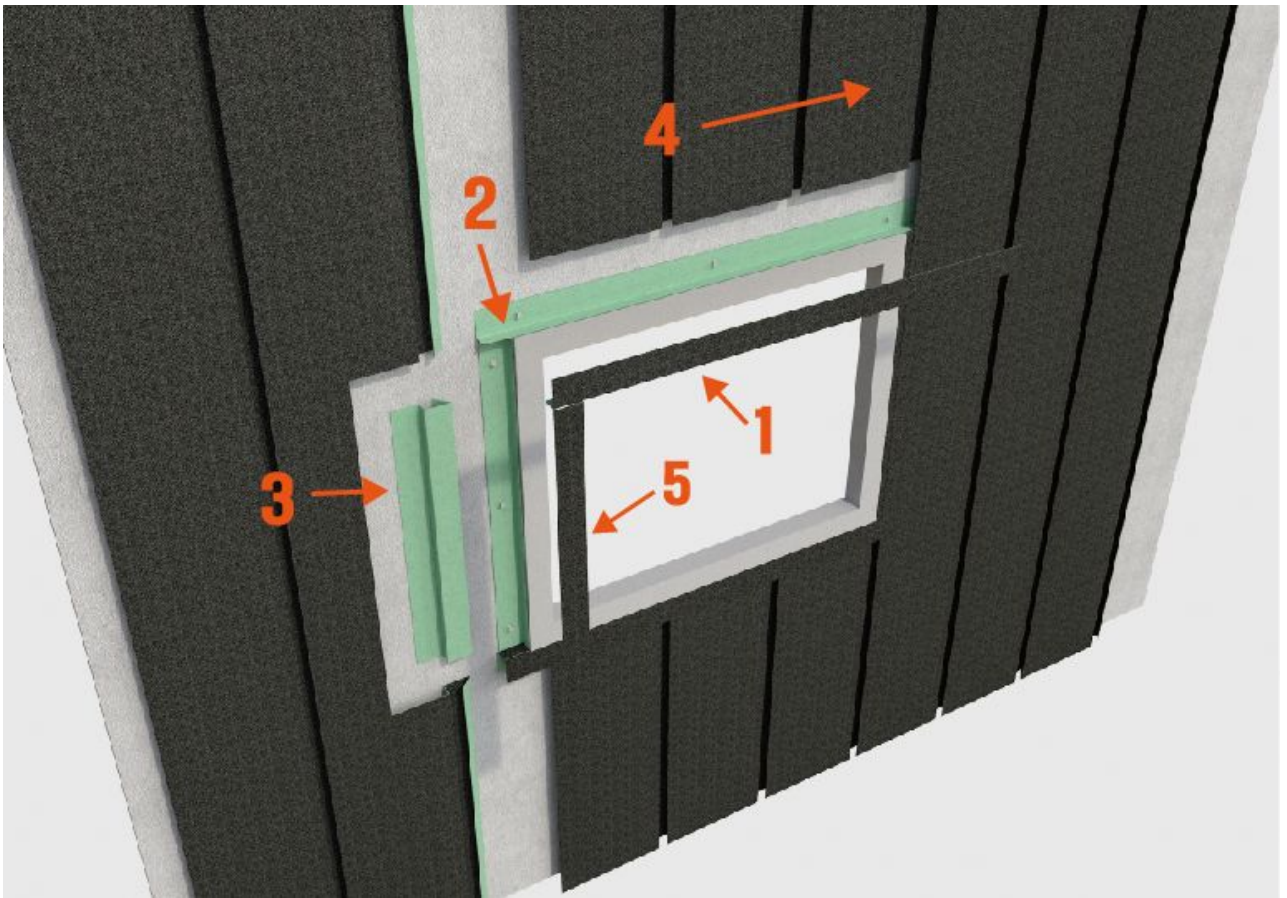

- 1- Cut the panel as shown on #1
- 2- Repeat the process
- 3- Put J channel panels together

- 4- Finish using sealant on #3 in picture

Mattone installation – [Easy way] for window frames

- 1- Cut L panels fitting around a window frame in pairs
- 2- Put L panels around window frame inside out. Water channel should be applied sealant for drainability
- 3- Cut excessive mattone parts from the installation. Install inside out to use as supporting material
- 4- Install from left to right.
- 5- L panel should be installed after sealant is applied.
